

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made Dynamin Category Section according to category-wise products

This is my home page Where i render Categories

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

#### DYNAMIC ROUTING FOR CATEGORY

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

### Dynamic Component for Category

```
File Edit Selection View Go Run Terminal Help <- > market-place-builder-hackathon-03
EXPLORER Category.tsx ...
src > app > components > Category.tsx ...
12 export default function Category({ ...
13   const handleAddToCart = (e: React.MouseEvent, product: IProducts) => {
14     ...
15   };
16   ...
17   return (
18     <section>
19       <div className="w-[92%] mx-auto mt-40 md:mt-20 mb-20">
20         <h1 className="md:text-[32px] text-xl font-montserrat font-medium md:text-left pl-0 md:pl-6 text-center mb-4">
21           Our products for {category}</h1>
22         <div className="font-montserrat px-4 sm:px-0 sm:mx-auto grid grid-cols-1 gap-10 sm:grid-cols-2 md:grid-cols-3 lg:grid-cols-4">
23           {products.map((product) => (
24             <div key={product._id} className="py-4 px-4 bg-borderGray rounded-xl">
25               <a href={`/category/${product._id}`}>
26                 <div className="overflow-hidden rounded-xl h-96">
27                   <Image alt={product.name} width={400} height={400} className="w-full h-full object-cover duration-500 transform hover:scale-125 rounded-xl" src={urlFor(product.image).url()}/>
28                 </div>
29               <h2 className="scroll-m-20 text-lg lg:text-xl font-medium tracking-tight text-darkPrimary mt-2">
30                 {product.name}</h2>
31               ...
32               /* price */
33               <p className="scroll-m-20 text-lg font-medium tracking-tight text-darkPrimary mt-1">
34                 &#8361;{product.price}</p>
35             </div>
36             <Link onClick={(e) => handleAddToCart(e, product)} className="bg-darkPrimary w-full py-4 text-myWhite rounded hover:bg-myPrimary focus:bg-black">
37               Add to Cart</Link>
38           <Button onClick={() => handleAddToCart(e, product)} className="bg-darkPrimary w-full py-4 text-myWhite rounded hover:bg-myPrimary focus:bg-black">
39             Add to Cart</Button>
40           ...
41         </div>
42       </div>
43     </section>
44   );
45 }
46 </Category>
```

### Dynamic Category Component Render Here [Category] --> page.tsx

```
File Edit Selection View Go Run Terminal Help <- > market-place-builder-hackathon-03
EXPLORER page.tsx M ...
src > app > category > page.tsx ...
1 import { IProducts } from '@types/productTypes';
2 import { client } from '@sanity/lib/client';
3 import Category from '../components/category';
4 import SelectButton from '../components/common/selectButton';
5
6 // Fetch data on the server
7 async function getData(category: string) {
8   const query = `*[_type == "product" && category->name == "${category}"]{
9     "image": image.asset->url,
10     name,
11     price,
12     id,
13     "slug": slug.current,
14     "categoryName": category->name,
15   }`;
16
17   const data = await client.fetch(query);
18   return data;
19 }
20
21 // Server component
22 export default async function Page({ params: { category: string } }) {
23   const products: IProducts[] = await getData(params.category); // Fetch data here
24
25   return (
26     <div>
27       <div className="block lg:hidden mt-72">
28         <SelectButton />
29       </div>
30       <Category products={products} category={params.category} /> {/* Pass as props */}
31     </div>
32   );
33 }
```

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made a dynamic product details page which one we click that opens in dynamic routs

The screenshot shows a web browser window displaying a product detail page. The URL in the address bar is <https://market-place-builder-hackathon-03.vercelapp.com/category/product-8>. The page features a large image of a room with a white chair and a small table. The product title is "Plant Pots Pure Aura" with a 4-star rating. The "Features" section lists "Premium material", "Handmade upholstery", and "Quality timeless classic". The "Description" section states: "A timeless design, with premium materials features as one of our most popular and iconic pieces. The dandy chair is perfect for any stylish living space with beech legs and lambskin leather upholstery." The "Dimensions" section shows "Height: 110cm Width: 75cm Depth: 50cm". The "Stock" section indicates "50". The price is listed as "\$ 280" with an "Add to Cart" button. A "Back to shopping" link is at the bottom.

The screenshot shows a second dynamic product details page. The URL in the address bar is <https://market-place-builder-hackathon-03.vercelapp.com/category/product-13>. It features a large image of a room with a grey armchair and a patterned rug. The product title is "Cutlery Nordic Elegance" with a 4-star rating. The "Features" section lists "Premium material", "Handmade upholstery", and "Quality timeless classic". The "Description" section states: "A timeless design, with premium materials features as one of our most popular and iconic pieces. The dandy chair is perfect for any stylish living space with beech legs and lambskin leather upholstery." The "Dimensions" section shows "Height: 110cm Width: 75cm Depth: 50cm". The "Stock" section indicates "50". The price is listed as "\$ 280" with an "Add to Cart" button. A "Back to shopping" link is at the bottom.

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made a Dynamic Product Details Components

```
src > app > components > ProductDetails.tsx > ProductDetails
14 const ProductDetails = ({ product }: { product: IProducts }) => {
39
40
41 return (
42   <section className="w-[90%] mx-auto">
43     <div key={product._id} className="container mx-auto my-4">
44       /* Product Image */
45       <div className="w-full flex flex-wrap lg:flex-nnowrap md:flex-nnowrap overflow-hidden items-center justify-center rounded">
46         <Image
47           src={product.image}
48           alt={product.name}
49           width={450}
50           height={450}
51           className="md:w-[35%] rounded hover:scale-125 duration-500 object-contain"
52         />
53
54       /* Category */
55       <div className="lg:w-1/2 w-full lg:pl-10 lg:py-6 mt-6 lg:mt-0">
56         <h2 className="scroll-m-20 text-lg font-normal tracking-wider text-darkPrimary">
57           {product.categoryName}
58         </h2>
59
60       /* Title */
61       <h1 className="scroll-m-20 text-3xl font-semibold tracking-tight text-darkPrimary mb-1">
62         {product.name}
63       </h1>
64
65       /* Rating */
66       <div className="rating rating-sm mt-2">

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made Cart and checkout Section Functionally & dynamically

Either we click here products card, add to cart button

or we click here products card, add to cart button

A screenshot of a web browser displaying a product page. The page features a large image of a grey armchair in a modern interior setting. Below the image, the product title is 'Cutlery Nordic Elegance' with a 3-star rating. The 'Features' section lists premium material, handmade upholstery, and quality timeless classic. The 'Description' section provides a brief overview of the chair's design and materials. The 'Dimensions' section lists height (110cm), width (75cm), and depth (50cm). The 'Stock' section shows 50 units available. The price is listed as \$ 280. An 'Add to Cart' button is located at the bottom right.

A screenshot of a web browser displaying a shopping cart page. The page shows a summary of the items in the cart, including the 'Nordic Elegance' chair added earlier. A success message 'Nordic Elegance added to cart' is displayed. The cart summary table shows a total of \$ 280.00. A 'PROCEED' button is located at the bottom of the table.

we navigate to dynamically cart page which is fully functional

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made a add to cart Function here in action.ts file

```
src > app > action > TS actions.ts ...
1 import { IProducts } from "@types/productTypes"
2
3
4 export const addToCart = (product : IProducts) => {
5   const cart : IProducts[] = JSON.parse(localStorage.getItem('cart') || '[]')
6
7   const existingProductIndex = cart.findIndex(item => item._id === product._id)
8
9   if(existingProductIndex > -1) {
10     cart[existingProductIndex].quantity += 1
11   }
12   else {
13     cart.push({
14       ...product, quantity: 1
15     })
16   }
17
18   localStorage.setItem('cart', JSON.stringify(cart))
19 }
20
21 export const removeFromCart = (productId : string) => {
22   let cart : IProducts[] = JSON.parse(localStorage.getItem('cart') || '[]')
23   cart = cart.filter(item => item._id !== productId)
24   localStorage.setItem('cart', JSON.stringify(cart))
25 }
26
27 export const updateCartQuantity = (productId : string, quantity : number) => {
28   const cart : IProducts[] = JSON.parse(localStorage.getItem('cart') || '[]')
29   const productIndex = cart.findIndex(item => item.id === productId)
30
31   if(productIndex > -1) {
32     cart[productIndex].quantity = quantity;
33     localStorage.setItem('cart', JSON.stringify(cart))
34   }
35 }
36
37 export const getCartItems = () : IProducts[] => {
38   return JSON.parse(localStorage.getItem('cart') || '[]')
}
```

I did implementation here in productComponents

```
src > app > components > ProductComponents.tsx > ProductComponents
18 export default function ProductComponents() {
19   const currentProducts = [
20     {
21       id: '1',
22       name: 'Laptop',
23       image: 'https://via.placeholder.com/100x100',
24       price: 1200
25     },
26     {
27       id: '2',
28       name: 'Smartphone',
29       image: 'https://via.placeholder.com/100x100',
30       price: 800
31     },
32     {
33       id: '3',
34       name: 'Tablet',
35       image: 'https://via.placeholder.com/100x100',
36       price: 600
37     }
38   ]
39
40   return (
41     <div>
42       <h1>Product Components</h1>
43       <ul>
44         {currentProducts.map((product) => (
45           <li>
46             <div>
47               <img alt={product.name} src={product.image} />
48               <div>{product.name}</div>
49               <div>${product.price}</div>
50             </div>
51             <button onClick={() => handleAddToCart(e, product)}>Add to Cart</button>
52           </li>
53         ))}
54       </ul>
55     </div>
56   )
57 }
```

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

The Nav bar has a shopping cart icon which is dynamically updated when we click any product's Add to Cart button but they do not show the number of cart items increase without a refreshing page (I am facing this problem but learned a lot)

Otherwise, [Add to cart](#) is fully functional and works well  
increase, decrease and remove items all work well

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

Shopping Cart Components here and i use it to Navbar and Mobile Navbar components

```
src > app > components > common > ShoppingCardBasket.tsx > ShoppingCardBasket
1  "use client"
2  import { getCartItems } from '@app/actions';
3  import { IProducts } from '@types/producttypes';
4  import { ShoppingCart } from 'lucide-react'
5  import Link from 'next/link'
6  import React, { useEffect, useState } from 'react'
7
8  function ShoppingCardBasket() {
9    const [cartItems, setCartItems] = useState<IProducts[]>([]);
10
11   useEffect(() => {
12     setCartItems(getCartItems());
13   }, []);
14
15   return (
16     <div>
17       <Link href="/cart">
18         <div tabIndex={0} className="cursor-pointer group mt-2 mr-1">
19           <div className="indicator">
20             <ShoppingCart className="size-6 group-hover:text-darkPrimary duration-300" />
21             {cartItems.length > 0 &&
22               <span className="badge badge-sm font-normal indicator-item bg-darkPrimary text-mywhite group->
23             }
24           </div>
25         </div>
26       </Link>
27     </div>
28   )
29
30   export default ShoppingCardBasket.
```

## DAY-4

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I made Check-out page  
when i click proceed button it will navigate to checkout section

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

This is my Check-out page  
which contains a two-section order summary and billing information form with validation

checkout ---> page.tsx

```
const checkout = () => {  
  return (  
    <div>  
      <div>  
        <BackToShoppingLink />  
      </div>  
      <div>  
        /* Order Summary */  
        <div>  
          <h2>Order Summary</h2>  
          <table>  
            <thead>  
              <tr>  
                <th>Product</th>  
                <th>Quantity</th>  
                <th>Price</th>  
              </tr>  
            </thead>  
            <tbody>  
              <tr>  
                <td>Nordic Elegance Chair</td>  
                <td>1</td>  
                <td>$280</td>  
              </tr>  
              <tr>  
                <td>Sleek Living Table</td>  
                <td>1</td>  
                <td>$300</td>  
              </tr>  
            </tbody>  
          </table>  
        </div>  
        /* Divider */  
        <div>  
          <hr style="border-top: 1px solid #ccc; border-bottom: none; border-left: none; border-right: none; margin-bottom: 10px;" />  
        </div>  
        /* Product Image */  
        {cartItems.length > 0 ?  
          <div>  
            <div>  
              <img alt="Placeholder for product image" style="width: 100%; height: 100%; object-fit: cover; border-radius: 10px; border: 1px solid #ccc; border-bottom: none; border-left: none; border-right: none; margin-bottom: 10px;" />  
            <div>  
              <h3>Product Image</h3>  
              <p>This is a placeholder for the product image. The actual image will be displayed here once the product is selected.</p>  
            </div>  
          </div>  
        : null}  
      </div>  
    </div>  
  )  
}
```

## DAY-4

### Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I store ORDER Data in Sanity

Order Schema

```
src > sanity > schemaTypes > TS orders > (e) default > ⚡ fields
1 import { defineField, defineType } from "sanity";
2
3 export default defineType({
4   name: "order",
5   type: "document",
6   title: "Order",
7   fields: [
8     defineField({
9       name: "firstName",
10      title: "First Name",
11      type: "string"
12    }),
13
14    defineField({
15      name: "lastName",
16      title: "Last Name",
17      type: "string"
18    }),
19    defineField({
20      name: "address",
21      title: "Address",
22      type: "string"
23    }),
24    defineField({
25      name: "city",
26      title: "City",
27      type: "string"
28    }),
29    defineField({
30      name: "zipcode",
31      title: "Zip Code",
32      type: "string"
33    }),
34  ],
35})
```

## DAY-4

# Marketplace " De'cor "

## BUILDING DYNAMIC FRONTEND COMPONENTS

I am doing documentation after completion all six days of work done

I applied Functionality on the check-out page to send order data in Sanity

The screenshot shows the VS Code interface with the file `page.tsx` open in the editor. The code implements a `handlePlaceOrder` function that uses the  `Swal.fire` library to show a processing dialog. It then checks if the form is valid and removes an item from local storage. If successful, it shows a success message; otherwise, it shows an error message. Finally, it creates an order object and sends it to a client. The code is annotated with line numbers from 12 to 104.

```
const handlePlaceOrder = () => {
  Swal.fire({
    title: "Processing your order...",
    text: "Please wait a moment.",
    icon: "info",
    showCancelButton: true,
    confirmButtonColor: "#2A254B",
    cancelButtonColor: "#4E4D93",
    iconColor: "#2A254B",
    confirmButtonText: "Proceed"
  }).then(result => {
    if (result.isConfirmed) {
      if (validateForm()) {
        localStorage.removeItem("appliedDelivery");
        Swal.fire(
          "Success!",
          "Your order has been successfully processed!",
          "success"
        );
      } else {
        Swal.fire(
          "Error!",
          "Please fill in all the fields before proceeding!",
          "error"
        );
      }
    }
  });
};

const orderData = {
```

The screenshot shows the VS Code interface with the file `page.tsx` open in the editor. The code for the `handlePlaceOrder` function is now complete. It includes the creation of the `orderData` object, the `try` block for sending the data to the client, and the `catch` block for handling errors. The code is annotated with line numbers from 12 to 127.

```
const handlePlaceOrder = () => {
  const result => {
    ...
  };
};

const orderData = {
  _type: "order",
  firstName: formValues.firstName,
  lastName: formValues.lastName,
  address: formValues.address,
  city: formValues.city,
  zipcode: formValues.zipCode,
  contact: formValues.contact,
  email: formValues.email,
  cartItems: cartItems.map(item => ({
    _type: "reference",
    _ref: item._id,
  })),
  total: total,
  delivery: delivery,
  orderDate: new Date().toISOString()
};

try {
  await client.create(orderData)
  localStorage.removeItem("appliedDelivery")
}
catch (error) {
  console.error("error creating order", error)
}
```

Search, Filter, and Pagination Components are rendered here in Product components, and Functionality is also executed here

```
src > app > components > ProductComponents.tsx M ProductComponents
18 export default function ProductComponents() {
19   // Search Functionality
20   const handleSearch = (query: string) => {
21     const lowerQuery = query.toLowerCase();
22     const results = product.filter((val) =>
23       val.name.toLowerCase().includes(lowerQuery)
24     );
25     setFilteredProducts(results);
26     setCurrentPage(1);
27   };
28
29   // Filter by Category
30   const handleFilter = (category: string) => {
31     if (!category) {
32       setFilteredProducts(product);
33     } else {
34       const results = product.filter((val) => val.categoryName === category);
35       setFilteredProducts(results);
36     }
37     setCurrentPage(1);
38   };
39
40   // Filter by Price
41   const handlePriceRangeFilter = ([minPrice, maxPrice]: [number, number]) => {
42     const filtered = product.filter(
43       (p) => p.price >= minPrice && p.price <= maxPrice
44     );
45     setFilteredProducts(filtered);
46   };
47
48   // Pagination Logic
49   const indexOfLastProduct = currentPage * productsPerPage;
50   const indexOfFirstProduct = indexOfLastProduct - productsPerPage;
51   const currentProducts = filteredProducts.slice(
52     indexOfFirstProduct,
53     indexOfLastProduct
54   );
55
56   const totalPages = Math.ceil(filteredProducts.length / productsPerPage);
57 }
```
